WE ARE AN ENVIRONMENTALLY FRIENDLY ACCOMMODATION

Dear guests,

A warm welcome from the owners of the accommodation. We wish that your stay is well remembered and that we make it as pleasurable for you as possible.

Statement:

We are an environmentally friendly accommodation, and we obey the following rules:

- We do our best to act environmentally consciously.
- We inform our friends, family, and guests to do the same.
- We diligently take into considerations tips and solutions for responsible handling of natural resources and efficient energy use.

We are aware that such handling is first and foremost valuable for the environment. We do not need to do much to act more responsibly to the environment. We do not have to say no to leisure and other things we enjoy doing. For the most part, those are simple and barely noticeable acts. But with a few simple precautions, we can collaboratively make this world a better place to live. And leave it in equally good shape to our descendants.

We, as locals, are trying to be the most responsible as we can with our environment, and we are inviting you to do the same. We ask you for your understanding with us as we present you with the environmental sparks. We will be glad to see you put our propositions into action. As well we are happy to hear all your further suggestions and comments. We will try to either implement them or forward them to competent institutions.

With kind regards

SPARKS

1. Did you know that a person needs about 80 liters of fresh water per day for the sustainable living? In Slovenian households, we use somewhere from 130 to 200 liters per person. Only flushing the toilet comes with 2 to 8 liters of fresh drinking water, while for cooking we use about 6 liters of water per day.

If we add to this also the industrial use of water, the numbers increase to 300 to 500 liters per person per day.

Dear guests, we are happy to host you in an area of our planet, where the water is drinkable! So, fill up a glass of fresh water to your health!

We use water economically. So, turn off the tap during brushing your teeth and save up to 18 liters of water per minute. Adapt the current according to your needs.

2. When possible, we choose the right pan for the size of the cooking plate. When it comes to boiling, we simmer the power. We use lids to minimize the time of cooking.
3. Our accommodation is well-isolated, and it has energy-efficient windows. We always close doors and windows behind us. We air the rooms in the morning and then close the shutters, preventing heat to enter. By doing so, the rooms keep cool and we do not need extra cooling with air conditioning. With it, we lessen the carbon footprint.
4. We have installed led lighting. We turn off the lights when we do not need them. With it, we preserve the environment.
5. Please put the waste in the right containers and not in the nature or the watercourses. Waste that is put out in that manner, long-term pollutes underground water and other sources of drinkable water.

Thank you!
